3 July 2021

Welcome

Congratulations in taking the first step in downloading this Model Portfolio Report. We hope you find value in this report during your cryptocurrency journey of success as we explain what the average portfolio should look like in terms of diversity and potential growth. Nothing in this report should be considered as financial advice and it is merely to give you an idea of how you could implement or use this report and the suggested Model Portfolio, to your own advantage. We will also show you which products could best fit your style of trading to achieve your goals and ultimately have the optimal chance to make potential generational wealth for your family and loved ones. You must consult your own financial advisor while this report should be regarded as educational content.

About Bitcoin Trend and Forecast

Bitcoin Trend and Forecast has been providing cryptocurrency analysis for 6 years now. We are one of the fastest growing Cryptocurrency memberships in the world. We say this with gratitude while our analysts have grown from one person to a dedicated analysts and administration team supporting people from all walks of life around the world. Our products have grown from a simple single page Bitcoin PDF Report to dedicated cryptocurrency products to fit each individuals' need, whatever this may be. Our Cryptocurrency training course/s are world class, self-developed. We provide a lucrative Affiliate system where we share the sales of our products with you.

You may want to create your own affiliate link here and use the sponsor Bitcoin. <https://bitcointaf.com/Bitcoin>

Marius Landman is the Founder of Bitcoin Trend and Forecast and have developed a proprietary cryptocurrency algorithm based upon the Bayesian Algorithm Model, Palindromic data analysis and Algorithm Gamma Statistics. Don't worry if you do not understand this language because we have simplified all the data for you in a clear chart analysis (sample shown here below this paragraph). All you need to do is to follow the Bayesian Algorithm (only one in the world), you trade the uptrend or downtrend and as per the charts indicated in the simple to read PDF format. When the Bayesian Algorithm shows markets are moving up, then it means in general all cryptocurrencies are going upwards. We then also provide analysis on each ALT coin, Defi, NFT or token we follow. We make it easy for you to follow the charts. We also rely on you to use our data as a guideline and have some form of savviness, which we know you already have, thus the reason you downloaded this report. Get it!

You can read more about the world-renowned Oil & Gas expert Marius Landman [link here](#)

Sample of the Bayesian Algorithm: Time Machine that predicts the future.

Sample of the Gamma Statistics Predictive Algorithm.

The Model Portfolio > 75% - 20% - 5% (suggested)

I am going to explain the Model Portfolio here and then I will give you the product solutions you need to use to achieve your goals. Let's get into it straight away. Note, if you need to understand the difference between ALT coins, Defi, NFTs and Tokens then go to the last pages of this report as we give you a brief description of these cryptocurrencies.

Start with a 24-month plan in mind and *case study: \$10,000 (just using an average)

The three portfolios within the Model Portfolio are:

1. #TenFingers Portfolio > around 75%
2. #TwoPalms Portfolio > 20%
3. #RandomBagHolders Portfolio > around 5%

In this *case study, during a downtrend, an investor has full control over the crypto count. The investor wants to increase for example 100 Litecoin into 120 Litecoin and so on. Nobody has control over the US\$, so forget about the value of the US\$ for now and focus on increasing the crypto count. The \$ value will take care of itself over the next 24 months as inflation (everything is about to get more expensive), world events, a pandemic or more health scares, crypto adoption and fiat currency devaluation forms the perfect storm to take Bitcoin and cryptocurrencies upwards and some cryptocurrencies is set to go up thousands of percent over the next few years.

In an uptrend, we make \$ value. You need to understand the two differences in market cycles and we are taking the position that you have some form of understanding of market cycles, while reading this Model Portfolio. There is a perfect storm coming and as of today that storm is yet to form and we should see a move which we named #Catapult3, that will take cryptocurrencies way upwards. And yes, this upwards cycle that is occurring right now, is not even the #Catapult #3, I am referring to right now.

I. #TenFingers Portfolio 75% - 100%

- The #TheFingers Portfolio is a longer term buy and hold position. Normally trades are between 30 – 180 days but in general, when gains are made, one should consider limiting exposure to risk by exiting positions. Again, please note nothing in this report must be taken as financial advice.

In this case, we select 1 or 2 coins (thumbs) to actively trade by buying low selling high: > repeat the process as many times possible. We are using #LTC and #BCH (you may choose your own coins; they must be fast movers). Choose two coins you are familiar with and those coins are the ones you will study, learn and know everything about. They are the two thumbs, left and right thumb.

- From farming (buy low sell high), and following our daily Blog Posts, Bitcoin reports, weekly live Zoom calls, add the gains/profits made to the #TwoPalms and #RandomBagHolders below as explained on the next pages.
- You can also add gains/profits to the other #TenFingers (below) but ensure your overall Model Portfolio stays at 75% - 20% - 5%. In this case, the other coins are ETH XRP EOS BSV BTC NEO DGB. You can choose your own major top 9 coins.
- In this case study we will have the #TenFingers spread out randomly as shown in percentages LTC 20%; ETH 12%; XRP 13%; and so forth.
- The #TenFingers Portfolio should not have more than 9 coins, preferably 5 with one being CASH (always hold a bit of cash).

Left hand fingers					Right hand fingers				
Coin 1	Coin 2	Coin 3	Coin 4	Coin 5	Coin 6	Coin 7	Coin 8	Coin 9	Coin 10
Thumb	Index	Middle	Ring	Pinky	Pinky	Ring	Middle	Index	Thumb
Actively trade									
Actively accumulating									
Use two coins to actively farm									
#LTC									#BCH
	#ETH	#XRP	#EOS	#BSV	Cash	#BTC	#NEO	#DGB	
<20%	<12%	<13%	<4%	<9%	5-10%	<6%	<4%	<8%	<20%

Let's move on to the #TwoPlams Portfolio

2. #TwoPalms Portfolio 20%

- Select a number of coins, no more than 10 long term coins (prefer less than 5).
- Plan to hold long term (>24 months) and sell, exit/limit exposure at major drops and algorithmic cycle points. You will need to follow the Daily Blog Posts, Bitcoin reports as this will give you clear direction on how to play the market.
- We have taken the guesswork out for you and made it so simple to understand. If you then have further questions, attend the weekly live Zoom calls and come and ask your questions.
- You can also arrange a private Zoom call with our team [click here](#)
- The Bitcoin & ALT reports, videos and live weekly Zoom calls we produce will identify all major drops long before it is due.

Left palm					Right palm				
Add profits made from trading the two thumbs into these coins below and actively increase crypto count									
#LINK	#THETA	#BNB	#QTUM	#DASH	#ZEC	#PPT	#PIVX	#OMG	#IOTA
#ICX	#ETC	#CND	#ADA	#XTZ	#BAT	#ARK	#AdEx	#POE	other

3. #RandomBagHolders Portfolio 5%-10%

- Choose your top 5 to 10 small cap big gains but RandomBagHolders
- Keep for >24 months (long term) and add to these positions from profits farming/trading #TwoThumbs
- Only sell or exit or limit exposure at major algorithmic cycle drop points
- Pay attention to the Daily Blog Posts and new Bitcoin Reports as they will add tremendous value guiding you.

Long Term Bag Holders >24 months									
Add profits made from trading the two thumbs into these coins below and actively increase crypto count

\$100 – \$500	\$200- \$300	\$150	\$100 – \$500	\$150- \$400	\$150 – \$400	\$200 – \$300	\$100 – \$300	\$200 – \$500	\$100 – \$500

Let's move on to The Products – see next page

The Products

We recommend you become a subscriber and get the full information on how to trade and become successful. Almost 90% of all Cryptocurrency investors lose money and their portfolios dwindle slowly to zero. You've heard the story of most people who did not sell their Bitcoin when it hit \$20,000 and, in some cases, if a Bitcoin investor had \$100,000 their portfolio dwindled back to \$2000 or even lower.

Right before the high of 17 December 2020 we called the incoming HIGH for Bitcoin and warned our members around the world to sell Bitcoin at \$19500. Click here to see the report from [5 December 2017](#)

Here is a snapshot of the products we have to help you succeed. To be successful in using the Model Portfolio mentioned in this report, you can utilise a number of Subscriptions here below. They all will form the perfect subscription for you to maximise gains and grow your Model Portfolio. We also recommend you take advantage of the training courses. There are two types of Training Courses and they are:

1. Day Trade Self Pace Training Course video modules [link here](#) or
2. The live Scalp Trade Hodlnots trading course with Wendy Landman and her team of professionals [link here](#)

Start with 1. Long Term Trade Reports, plus 2. #SmallCapBigGains and then work your way up to ad Scalp and Day trade. To see a more detailed explanation of the products [click here](#)

We hope this free Bitcoin Trend and Forecast Model Portfolio will help you tremendously and we are looking forward seeing you on one of the live weekly Zoom calls.

Marius Landman
Founder Bitcoin Trend and Forecast

In below pages I will explain to you what ALT coins, Defi, NFT and tokens are (why we focus on these assets), just a quick simple explanation and also give you an example of what our report charts look like. I will use Bitcoin as an example.

Why focus on Small Caps, NFT's and Defi coins?

With so much going on in the Small Cap, Defi, and NFT space it can be overwhelming keeping up with all the news, trends and movement in this rapidly growing sector. Small Caps, NFT's and Defi coins make up 7.1% of the overall cryptocurrency market with a combined market cap of \$104B this category of coins represents some of the most exciting and fastest growing projects in the crypto space.

At Bitcoins Trend & Forecast we've created this specialized report to allow our analysts the opportunity to focus on this important and growing category. In addition to providing the top 20 coins we will also bring you new projects we believe have merit and market potential that will give you an early lead.

What are Non-Fungible Tokens

Non-fungible tokens (NFT) are digital assets that represent a wide range of unique tangible and intangible items, from collectible sports cards to virtual real estate, and even digital sneakers and works of art.

One of the main benefits of owning a digital collectible versus a physical collectible like a Pokemon card or rare minted coin is that each NFT contains distinguishing information that makes it both distinct from any other NFT and easily verifiable. This makes the creation and circulation of fake collectibles pointless because each item can be traced back to the original issuer.

Unlike regular cryptocurrencies, NFTs cannot be directly exchanged with one another. This is because no two NFTs are identical – even those that exist on the same platform, game or in the same collection. Think of them as festival tickets. Each ticket contains specific information including the purchaser's name, the date of the event and the venue. This data makes it impossible for festival tickets to be traded with one another.

The vast majority of NFT tokens were built using one of two Ethereum token standards (ERC-721 and ERC-1155) – blueprints created by Ethereum that enable software developers to easily deploy NFTs and ensure they're compatible with the broader ecosystem, including exchanges and wallet services like MetaMask and MyEtherWallet. Eos, Neo and Tron have also released their own NFT token standards to encourage developers to build and host NFTs on their blockchain networks.

NFTs have become hugely popular with crypto users and companies alike because of the way they revolutionized the gaming and collectibles space. Since November 2017, there has been a total of \$174M spent on NFTs.

What are Defi's

DeFi is short for "decentralized finance," an umbrella term for a variety of financial applications in cryptocurrency or blockchain geared toward disrupting financial intermediaries.

DeFi draws inspiration from blockchain, the technology behind the digital currency bitcoin, which allows several entities to hold a copy of a history of transactions, meaning it isn't controlled by a single, central source. That's important because centralized systems and human gatekeepers can limit the speed and sophistication of transactions while offering users less direct control over their money. DeFi is distinct because it expands the use of blockchain from simple value transfer to more complex financial use cases.

Bitcoin and many other digital-native assets stand out from legacy digital payment methods, such as those run by Visa and PayPal, in that they remove all middlemen from transactions. When you pay with a credit card for coffee at a cafe, a financial institution sits between you and the business, with control over the transaction, retaining the authority to stop or pause it and record it in its private ledger. With bitcoin, those institutions are cut out of the picture.

Small Cap Coins

Small Cap Coins by definition are any one of the roughly 70 coins that fall outside of the top 10 market cap coins. The total volume generated by this category is \$56B. Small Caps include but are not limited to Defi, NFT's, ERC20 coins, etc.

Example of a Bitcoin Chart (we provide charts for over 40 coins and more.)

I. Bitcoin #BTC

I. **Bitcoin #BTC:** Bitcoin created a high on 8 January 2021 at \$42,000. From here it formed a near perfect Bullish Pennant on the red FIB circle resistance point and broke upwards out of the Bullish Pennant through resistance into a high \$48,700. From here a second smaller bullish pennant (or Ascending Triangle) has formed and pushed Bitcoin higher into \$57,800. Cardano (ADA) is still ahead of Bitcoin and have already broken out of the outer red FIB channel. Bitcoin is due to follow the price action and direction of ADA higher. BTC has the ability to spike at any time.

- > The most likely next target for Bitcoin should be \$67499 as indicated in the chart below
- > The two black arrows indicate where BTC is in terms of the Bullish Pennant break out upwards or repeating pattern discussed in ETH

SUPPORT AND GENERAL INFORMATION

Long Term Trade Reports (this report, [Marius Landman's Algorithm](#)), offer in combination three different types of trading options. These trade options include:

- Long Term Trade reports – buy low and exit high, take profits > [link here](#) > see [I.A. Long Term Trade Reports](#)
- Small Cap Big Gains Report > this is a dedicated Defi, NFT and small caps report [link here](#) > see [I.B. Small Caps Big Gains](#)
- Short term Scalp Trades (HODLNOTS) – short 5 minute to 4-hour trades
- Day Trade Signals which are 1-3-day trade events

Under the umbrella of Long-Term Trade Reports (Marius Landman), the same algorithm applies to #HODLNOTS and #TrendSig Day Trade Signals. Find these products at <https://www.mariuslandman.com/get-membership.html> >select HODLNOTS and TrendSig.

1. Limit Exposure or exit points

- The term limit exposure means a trader could exit with 10%, or 20%, or 30% depending on the setup of the trader. The trader then sells higher and buys in lower.
- By law we cannot give financial advice, cannot tell you when to buy or sell, nor can we entice you to buy or sell. Use this report as a guideline for training and education purposes.
