MTT TAKES THE INSTITUTIONAL EDGE AND PUTS IT IN THE HANDS OF ITS MEMBERS.

Introducing the MTT Edge Transfer Season One

The MTT Edge Transfer is a new way to visually track the documented progress of MTT over time.

The concept is simple: the left bucket represents the traditional Institutional Edge — Wall Street, professional trading desks, algorithms, research teams and large market participants. The right bucket represents the MTT Edge being built through our documented trade results.

As MTT produces successful trades, the MTT bucket fills and the Institutional Edge bucket reduces.

How Edge Points Work

1% cumulative documented gain = 1 Edge Point

Since November 2025, MTT has recorded to date

- 3463 % Profit = Edge Points Captured
- 98 Documented Trades
- 35.3% Average Per Trade
- 63.9% of Season One Complete

SEASON 1 Target: 5000 Edge Points

The meter will be updated with each new MTT report, allowing members to follow the campaign as we move toward the first 5000-point milestone.

This is a visual campaign metric based on documented MTT trade performance and does not represent literal money taken from institutions.

THE MTT STRATEGY

We'll utilize opportunities in MTT to identify bottom swings, relying on levels calculated from historical data. Our approach is SIMPLE, employing our tried-and-true tools and opportunities. We adhere to current CHART LEVELS for optimal risk management and Target Points. We maintain Tentative Tops, Levels, and Weekly HPL Bottoms. We further use the early ladder-in CLOCK strategy as used by LTT - reports.

Receive PDF and Video Reports weekly or as market conditions demand. Notifications for new reports will be sent immediately through the Private Subscription Telegram Channel. For additional updates like Questions & Answers, join our weekly LIVE MTT Webinars on Wednesdays. Access information for Zoom Webinars is available in your members' login area at BitcoinTAF.com.

- Using the DETONATOR indicator system with this report is highly recommended
- Profits or gains can be conveniently transferred into your Foundation Coins or re-traded
- The recommended rule is to trade between 5 and 10 coins as the market permits and roll profits over continuously. - The Snowball Effect
- Medium Term Trades differ from Long Term Trade Reports, where trades are generally between 3 and 6 months
- Always download, read, and use the latest report; data can change quickly
- We analyse faster-moving cryptocurrencies that have the potential to outperform Bitcoin and other cryptocurrencies
- Interactive weekly private Zoom calls are recorded, including Q&A for subscribers
- Data is easy to understand and simple, while entry and exit points are clearly explained
- Support & Resistance lines as well as Pattern Trend Lines will be a support base and bottom
- Levels act as support and resistance, as well as stop losses
- Use the UTC Indicator method and Detonator Indicator System
- Note: This report is not financial advice. This is the Analyst's own strategy and chart setups.

Data Reports are intended to be forward-looking for no more than SEVEN days.
Always read and follow the latest Report. DO NOT follow the date or timelines.
World events will rapidly alter the timing and trajectory of markets.

Bitcoin (#BTC) MTT ANALYSIS

12 Hour

+17%

Bitcoin had a strong continuation period, recovering from the \$78K-\$80K area and pushing into the \$84K-\$87K zone by 23 September. The move was supported by renewed ETF inflows, improved risk appetite, and short liquidations as buyers stepped back into the market with more confidence. From a medium-term view, BTC is now looking much stronger, but the next key test is whether it can hold above the previous breakout region near \$80K-\$82K. If that zone becomes support, BTC can continue toward the next upside targets around \$88K-\$90K. A drop back below \$80K would likely signal a short-term reset before the next breakout attempt. We remain BULLISH.

12 Hour

208%

BACK

Great week since the last report, as the trend from the bottom of momentum, as well as the weekly trend line, broke out. It broke out below and found full confluence almost in a textbook manner, from the bottom at 0.077102 to the top at 0.24742, at a 208% move. Well done, and congratulations to everyone who took this trade. Currently in a sideways correction at the top of momentum, with a golden dot printed, and it definitely started playing out. We can expect higher highs here as the trend moves upwards and still remains above EMAs and the volume-weighted average. Alerts work well here, and remaining in or taking your positions in detonator confluence is a must.

PART 3

PRECIOUS METALS POWERHOUSE

Gold and Silver Market Dynamics

WRITTEN BY A HUMAN

#GOLD

12hr Chart

Gold is currently under short-term pressure, with GLD down around 1.7% today and spot gold recently reported near \$4,325/oz. The pullback is mainly driven by higher-for-longer U.S. rate expectations, a firmer dollar backdrop, and rising Treasury-yield pressure, which reduces the appeal of non-yielding assets like gold. In the near term, gold may remain choppy and defensive while markets price in Fed policy, inflation risk, oil prices, and the dollar. However, the broader structure is not dead — geopolitical uncertainty and central-bank demand can still support buyers if macro pressure cools. Gold is in a corrective phase, not a structural collapse. For now: short-term weakness, medium-term support still alive, but bulls need the dollar and yields to cool before a stronger continuation move can return.

WRITTEN BY A HUMAN

Overall Market Tone

For the period from September 9 to September 23, 2026, the overall market tone improved for AI semiconductors, memory, and selected AI software leaders, but remained very selective. AMD and Micron were among the strongest names, while NVIDIA remained a core AI infrastructure leader and Palantir showed strong relative strength in AI software. At the same time, smaller and more speculative names such as SOUN, QUBT, CORZ, BTDR, and APP remained more vulnerable to valuation pressure, execution risk, integration concerns, and profit-taking. The strongest structural themes remain AI compute, data center expansion, high-performance computing, sovereign AI, memory demand, HBM shortages, power-backed infrastructure, and selective crypto-to-AI infrastructure exposure. For MTT purposes, the focus should remain on quality leadership, strong catalysts, support confirmation, and disciplined entry timing rather than simply chasing every AI-related stock.

#QUBT

Over the period from September 9 to September 23, 2026, Quantum Computing Inc. (QUBT) showed some improvement after recent weakness, trading around the low-\$9 area by September 23. The broader quantum computing sector received renewed attention as investors looked toward major industry events, including the Quantum World Congress, where companies in the sector were expected to discuss commercialization, quantum roadmaps, cybersecurity, and the integration of quantum technology with AI and high-performance computing. QUBT also remained in focus after recent commentary around its quantum security platform and telecom-compatible photonics, which supports the longer-term narrative around quantum-secure communications. However, this remains a speculative, early-stage stock where revenue visibility, commercialization, and cash requirements remain important risks. For MTT purposes, QUBT remains a high-risk watchlist stock. A sustained reclaim of the \$9-\$10 region would be constructive, while failure to hold above that zone could keep the stock in a defensive consolidation phase.

MU

Over the period from September 9 to September 23, 2026, Micron Technology (MU) remained one of the strongest AI memory names, trading around the \$1,070 area by September 23. The stock continued to benefit from the AI memory supercycle, with investors focused on high-bandwidth memory demand, DRAM pricing power, HBM4, long-term customer agreements, and the company's upcoming fiscal Q4 earnings report. The market is watching whether Micron can maintain strong margins and confirm continued HBM demand heading into 2027. Taiwan labor developments also remained in focus because Taiwan is an important production center for Micron's DRAM and HBM chips, which are key components in AI servers. Looking ahead, MU remains a core MTT AI-memory leader, but after such a powerful year-to-date move, volatility and profit-taking remain normal. A clean consolidation above the \$1,000 area would be constructive, while a strong earnings confirmation could support the next medium-term leg.

CRYPTO FORECAST ENGINE

Our Top Medium-Term Predictions

The broader crypto market is showing a stronger recovery tone this week, with total crypto market cap near the \$2.94T area, 24h trading volume around \$130B, and Bitcoin dominance still elevated near 57.5%. Bitcoin is trading around the \$84K area, which confirms that the market is improving, but altcoin rotation remains selective. The best forecast setups remain the coins showing relative strength, clean reclaim levels and controlled continuation structures.

THE MTT 7∞3 MATRIX

Where Price Structure Meets Time

The MTT 7∞3 Matrix is one of the two main systems now used inside MTT.

It helps us identify where price is becoming important and when the market may be approaching a meaningful reaction zone.

1. THE MATRIX FINDS IT

The 7∞3 Matrix highlights areas where Price, Time and Structure begin to align.

2. THE DETONATOR CONFIRMS IT

The Detonator Confluence System then checks whether momentum, trend and technical conditions support the setup.

3. MTT TRADES IT

When the Matrix and Detonator begin to agree, we have a stronger MTT Trade Confluence. In simple terms:

Time–Price Confluence + Indicator Confluence = MTT Trade Confluence

NAMES / ABBREVIATIONS USED IN THE MTT REPORT

- DETA - DETONATOR A indicator
- DETB - DETONATOR B indicator
- DET C - DETONATOR C indicator
- HODL - HODLNATOR Indicator
- VWAP Blue - Volume Weighted Average Price - Blue Line
- DTM EMA - Day Trade Masters Exponential Moving Average Line - Green/Red Line
- T/L - Trend Line, usually based on a Chart Pattern
- W - Weekly
- D - Dially
- T/F - Time Frame
- HPL - Historical Projection Lines - The Core Support & Resistance indicators we use
- FIBS - Fibonacci Retracement / Extension Lines
- GOLDEN ZONE - Golden Fibonacci Zone usually between 0.618 and 0.65 ratio
- hr - Hour referring to Time Frame
- GOLDEN DOT - Golden Dot on Detonator B
- GD - Green Dot on Detonator B
- RD - Red Dot on Detonator B
- BT - Buy Tag on HODLNATOR Indicator
- ST - Sell Tag on HODLNATOR Indicator
- BL - Bull Flag
- DZ / SZ - Support Zone / Supply Zone
- PF - Pitchfork Analysis
- S/R - Support/ Resistance Line

BitcoinTAF.com MTT RELEVANT Courses

- The indicators used in MTT are called the DETONATOR, which consists of three parts. A B C
- These Indicators are available via the [Ultimate Trading Course](#).
- It is HIGHLY recommended to take this course, learn trading skills and use these Indicators with this report.
